2K300
Two-Component Polyurethane Coating

2K300 is a high performance two-component conformal coating, designed specifically for selective coating processes. 2K300 is characterised by greater coating thickness and enhanced edge coverage and shows extreme flexibility and extremely low stress on components.

- Improved high temperature performance coating
- Hydrophobic; excellent resistance to humidity, condensation and immersion in water
- Soft coating; provides low stress during typical automotive thermal shock cycles
- High coating thickness achievable; enhanced edge coverage

Approvals
- RoHS Compliant (2015/863EU): Yes
- REACH Compliant: Yes
- IPC-CC-830: Meets Requirements

Liquid Properties
- Appearance: Clear yellow/amber liquid
- Density @ 20°C: 0.93 g/ml (mixed)
- Flash Point: >100°C
- Min. Solids Content (1hr @80°C): >98.5%
- Mix Ratio: 5:1 v/v
- Viscosity (mixed) @ 20°C: 1500-2000mPa s
- Useable Life @ 20°C: 40 Minutes
- Touch Dry Time at 20°C: 240 Minutes
- Recommended Drying Time: 10 Minutes @ 80°C

Dry Film Coating
- Colour: Pale yellow, transparent
- Recommended Coating Thickness: 100-300µm
- Temperature Range: -65 to +150°C
- Thermal Shock Range: -65 to +140°C
- Thermal Shock (1000 cycles): No cracking, blistering or delamination*
- Shore Hardness: A20-30
- Glass Transition Temperature (Tg): -59°C (DMA)
- Elongation at Break (BS EN ISO 537): 40-50%
- Elastic Modulus
  - 5.22 MPa @ -40°C
  - 2.67 MPa @ 20°C
  - 2.96 MPa @ 130°C
- Tensile Strength: 0.9 MPa @ 20°C
- Dielectric Strength: 90 kV/mm
- Dielectric Constant: 2.5
- Dissipation Factor @ 1MHz, 25°C: 0.01
- Surface Insulation Resistance: $2 \times 10^{16} \, \Omega$
- Moisture Resistance (IPC-CC-830): $1.63 \times 10^{10} \, \Omega$

*Other thermal shock regimes are also possible, i.e. different temperatures, number of cycles, etc.

## Directions for Use

2K300 is intended to be applied by selective spray coating. It is recommended that the use of a high accuracy, volumetric metering system, such as progressive cavity pumps are used to control the mix ratio of the two components. It is recommended that a minimum 10 turn static mixer is used to ensure complete mixing of the two components prior to reaching the dispense valve. The use of a heated applicator block can result in reduced film builds and faster cycle times. 60°C is a typical set-point.

The material works best when a relatively high flow rate and low atomising air combination is used, but this will depend on the design of the assembly, required cycle times and other process considerations. Machine settings for various 2K selective spraying options are available upon request.

## Inspection

2K300 contains a UV trace, which allows inspection of the PCB after coating to ensure complete and even coverage; the stronger the reflected UV light, the thicker the coating layer is. UV light in the region of 375nm should be used for inspection.
